## No Power

- 1) Check the entire power cord and plug to see if it is damaged. If yes, please take the machine to a BISSELL Authorized Service Center to have a quality technician inspect the unit.
- 2) Check an alternate plug that is known to work. If no power to outlets, check circuit breaker. If still not working, please take the machine to a BISSELL Authorized Service Center to have a quality technician inspect the unit.
- 1) An internal thermal protector has been designed into the machine to protect it from overheating. When the thermal protector activates, the suction motor will stop operating. If this happens proceed as follows:
  - a. Turn the cleaner off (O) and unplug the unit.
  - b. Check the end of the hose and tool for blockages and remove if necessary.
  - c. Check the float stack for clogs and clean as necessary.
  - d. When the motor cools for approximately 30 minutes, the thermal protector automatically resets and cleaning may continue. If the thermal protector continues to activate after following the above steps, please take your machine to a BISSELL Authorized Service Center to have a quality technician inspect the unit.
